Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/779,821

Applicant(s)

KIM ET AL.

Examiner

Mark Blouin

Art Unit

2627

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 June 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4-15 and 17-24 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 15 and 17-24 is/are allowed.
- 6) ☒ Claim(s) 1,2,4-10,13 and 14 is/are rejected.
- 7) ☒ Claim(s) 11 and 12 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
 - 2) ☐ Certified copies of the priority documents have been received in Application No. _____.
 - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Detailed Action

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1,2,4-10,13, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamayama (JP 06-068574) in view Omori et al. (USPN 6,246,654).

3. Regarding Claim 1, Tamayama shows (Figs 1-5) an optical disc drive for a disc, comprising a main body (2), a spindle motor (6) attached to the main body; a tray (3) attached to the main body so as to be loadable/unloadable into/from the main body; and a disc holder (Fig. 4) rotatable by the spindle motor when the tray is in a loaded position, and joinable to a clamping hole of the disc so as to fix the disc, but does not show the spindle motor to be movable in an upward and downward direction with respect to the disc holder, however shows the upward and downward movement of the chucking mechanism.

Omori et al shows the spindle motor to be movable in an upward and downward direction (Fig. 22, arrow c) with respect to the disc holder.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the chucking mechanism of Tamayama with the spindle motor movement as taught by Omori et al. The rationale is as follows: One of ordinary skill in the art at the time the invention was made would have been motivated to provide

Art Unit: 2627

the chucking mechanism of Tamayama with the spindle motor movement as taught by Omori et al in order to engage the chucking mechanism.

4. Regarding Claim 2, Tamayama shows (Figs 1-5) an optical disc drive, wherein the optical disc drive further comprises: a rotatable shaft (9) installed through the tray with the disc holder joinable to one end of the rotatable shaft ; and a first gear (23) joinable to the other end of the rotatable shaft, wherein the spindle motor has a second gear (22) connectable to the first gear.

5. Regarding Claim 4, Tamayama shows (Figs 1-5) the optical disc drive, further comprising a first coupler (23) joinable to the disc holder, and a second coupler (22) is provided on the rotatable shaft of the spindle motor to be connectable to the first coupler in a male-female manner.

6. Regarding Claim 5, Tamayama shows (Figs 1-5) the optical disc drive according, wherein the first coupler and the second coupler are magnetically (24) attachable to each other.

7. Regarding Claim 6, Tamayama shows (Figs 1-5) the optical disc drive, wherein the optical disc drive further comprises a first rotatable shaft (9) installed through the tray with the disc holder joinable to one end of the first rotatable shaft, and a first coupler (23) joinable to the other end of the first rotatable shaft, and a second coupler (22) provided at a second rotatable shaft (10) of the spindle motor (6) to be connectable to the first coupler in a male-female manner.

8. Regarding Claim 7, Tamayama shows (Figs 1-5) the optical disc drive, wherein the second coupler (22) is installed to be elastically movable along the length of the second rotatable shaft (10) of the spindle motor.

Art Unit: 2627

9. Regarding Claim 8, Tamayama shows (Figs 1-5) the optical disc drive, wherein the disc holder is connectable to the spindle motor by a magnetic force (24) therebetween, to be rotated by the spindle motor (6).

10. Regarding Claim 9, Tamayama shows (Figs 1-5) the optical disc drive, wherein a magnet (24) is joined to the second rotatable shaft of the spindle motor, and at least a portion of the disc holder is formed with a material magnetically attachable to the magnet.

11. Regarding Claim 10, Tamayama shows (Figs 1-5) the optical disc drive, wherein at least a portion of the disc holder is formed with a magnet (24), and a member made of a material magnetically attachable to the magnet is joined to the second rotatable shaft (10) of the spindle motor.

12. Regarding Claim 13, Tamayama shows (Figs 1-5) the optical disc drive, wherein the tray comprises a circular opening, and the disc holder comprises a first member (23) and a second member (22) vertically joinable to each other to form an engagement groove (25) that is engageable with the circular opening, wherein the first member and the second member are joinable to each other from a top side and a bottom side of the tray (3) through the opening, to install the disc holder on the tray to be rotated.

13. Regarding Claim 14, Tamayama shows (Figs 1-5) the optical disc drive, wherein an insertion hole is formed at the second member (22) so that the rotatable shaft (10) of the spindle motor (6) is insertable into the insertion hole.

Allowable Subject Matter

14. Claims 15 and 17-24 are allowed.

Art Unit: 2627

15. Claims 11 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

16. Applicant's arguments filed June 27, 2006 have been fully considered but they are not persuasive.

The applicant asserts on Pages 7 and 8 that the spindle motor does not move in an upward and downward direction with respect to the disc holder.

The Examiner maintains that Omori clearly shows the spindle motor (39) moving in an upward and downward direction with respect to the disc holder (or tray, 3). The movement is shown by arrow c (**up is c, down is c'**). Therefore, the rejection of Claims 1,2, and 4-14 are upheld.

Conclusion

17. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the

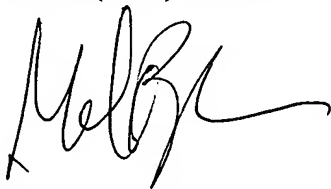

Art Unit: 2627

advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

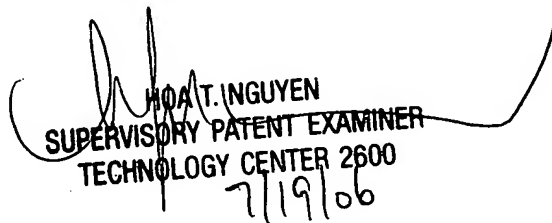

18. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Blouin whose telephone number is 571-272-7583. The examiner can normally be reached on M-F from 6:00 to 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa Nguyen, can be reached on 571-272-7579. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
